## ◆ 經營理念

### Our Business Philosophy

用心，負責的態度去製造讓顧客和自己滿意的產品，追求卓越的自我與產品的顛峰。

Through careful due diligence and responsible attitude, PEI-EI strives to provide top leading products and cutting-edge services to satisfy the biggest demands from customers. In Pursuing of product perfection and excellence is the ultimate goal.

## ◆ 經營方針

### Our Operating Strategies

**新：**觀念要新

**速：**產能要快

**實：**誠信為重

**簡：**務實簡化

New : Constant update with new concepts

Fast : Short lead time with on-time delivery

Honesty : Building trust with clients

Simple : To be simple and pragmatic

## ◆ 公司沿革

成立萬立可工業社，資本捌拾萬元整  
設廠於三重市大同北路  
1979.06

公司名稱更改北譯精機有限公司  
1980.05

遷移台北縣新莊市化成路  
1986.10

1990.08

電磁制動器斷磁設計  
通過中央標準局新型專利10年  
1990.08

成立天津北譯精密機械公司  
設廠於天津市北京街  
1994.09

成立北譯二廠，設廠於新莊市化成路  
產品小齒輪減速馬達  
1997.01

通過SGS ISO-9002認證  
1997.01

引進台灣濱井第一台「60SPNC」滾齒機  
1999.03

小型馬達通過SGS CE認證  
1999.11

通過減速馬達新式樣專利認證  
新式樣第068384號  
2000.10

小馬達成功批量外銷  
英國、日本、比利時  
2001.02

小馬達系列通過UL認證  
2002.04

小馬達通過大陸3C認證  
2003.10

設立北譯精機日本分公司  
2004.04

遷廠至桃園縣龜山鄉茶專路  
2005.12

引進高精度CNC滾齒機N60以及  
CNC齒型檢測機TII-120E  
2007.11

200W小型馬達和直線型減速機開發成功  
2008.03

引進德國蔡司三次元量測儀  
2011.10

通過 ISO-9001 : 2008 認證  
2013.11

通過 ISO-9001 : 2015 認證  
2016.11

### 精密設備

「全面品管」在北譯絕不是一句口號，我們對品質的執著，對每一個產品的要求都有嚴格的指導書，一步一腳印踏實的品管不論從進料到裝配完成品的檢驗，已完全符合客戶要求及北譯的品質標準，品保部門有最精密的檢驗儀器，所謂「工欲善其事 必先利其器」這就是北譯品質信賴的保證。

### PRECISE EQUIPMENT

"Total quality control" is never just a slogan, but is our insistent pursuit of perfection and excellence on our products. We have detail strict QC guide and procedure to ensure the quality, which are including of precise inspection equipments.

裝配線的一角

Perfect Control

Professional

### 最專業的工具機

北譯為增進技術精良，斥資購置整套 CNC 電腦加工機械設備，以精密零件加工配合優秀工程人員，提升零件精度確保穩定的品質。

### THE MOST PROFESSIONAL TOOL MACHINE

To promote our technology and skill, Pe-ei invested a whole set of CNC computer processing equipment. Accompany with qualified engineers, we are capable to elevate the accuracy of each component to assure of stable good quality.

技術研發室  
Technical research and development room

## Education and Training

Professional

### 電腦輔助設計

在每一個生產高品質的背後，每一個流程及步驟都必須投入很多的設計概念與經驗，在北譯我們有經驗豐富的優秀人才及高品質的設計環境，配合電腦輔助設計提高生產力及創造力，快速而完整地提供客戶一個滿意的解決問題之道。

### COMPUTER-AIDED DESIGN

The superior quality of production is the result of tremendous design concept and cumulating experiences be investing in each procedures and steps. We have qualified persons of talent with good experiences and high quality design environment. And with computer-aided design program of CAD, we are competent to promote productivity as well as creativity that may completely and quickly consolidate to a satisfactory solution for our clients.

北譯對每一位員工定期的教育訓練，這樣才能讓北譯的每一位員工追求卓越的自我與產品的巔峰。

Pe-ei has a regularly scheduled training problem for each employee to allow he/she to pursue the same goal of perfection, innovation and top quality as company.

辦公室管理 Office control

## 乾式單板電磁離合器 制動器的優點 :

- 操作性能好
- 可靠性高
- 瞬敏度高
- 結構簡單、經濟

## ADVANTAGE OF DRY SINGLE PANEL ELECTROMAGNETIC CLUTCH, BRAKE

- Excellent performance
- High reliability
- High precision
- Simple structure and compact size

## 電磁離合器 制動器的基本使用方法 :

### 連接與切離動作

驅動部位與起動部位之間安裝離合器，則不須停止驅動處，起動處會依必要反應做連接與切離的動作

### 保持制動

為了維持於慣性負荷、緊急狀況、作業途中時的機器中斷而使用制動器

### 變速

作業途中時有相互轉換速度的情形、此時使用離合器、則不須關閉驅動處即可變速

### 正反轉

負荷點的正反轉切換時、配合離合器使用則驅動處只要順向回轉即可

## BASIC USE METHOD FOR ELECTROMAGNETIC CLUTCH, BRAKE

### Connection and disconnection

To install clutch between driving location and starting location, there is no need to stop the driving and the starting point will be connection and disconnection just in accordance with necessary reaction.

### Keep brake in action

Brake is used to maintain inertia load, or in case of emergency or abrupt stop during operation.

### Speed change

During operation there are times that requires change of speed where the clutch comes to play. Transmission can then be made without turning off the driving point.

### Reciprocal turn

Reciprocal turn switchover of the load point may be made with the use of the clutch by turning the driving point clockwise.

### 高頻運轉

在快速循環中的斷續運轉、反覆利用馬達上的 ON 、 OFF 所提供的頻度有限、因此使用離合制動器、使之迅速反應、高精度的制動

### 位置推算

停留在測定位置或定量的傳送都須仰賴高精度定位裝置、使用離合制動器便能達到定位或定量功能

### 寸動

機械開始作動與位置接合時、只須以離合器瞬時作動即可

### 緩衝起動、制動

減少對負荷的衝擊之起動、停止，可調節轉速使用但如發熱過大、應把滑差的時間縮短

### High frequency operation

In a fast cyclic intermittent run of the clutch brake, use the frequency as shown on ON, OFF of the motor repeatedly to achieve rapid reaction and high precision brake.

### Position reckoning

Stop in a setting-out position or quantitative transmission all requires high precision positioning device. Use of the clutch brake can achieve this purpose.

### Short movement

When machinery begins to move and connect the position, all needed is an instant action of the clutch.

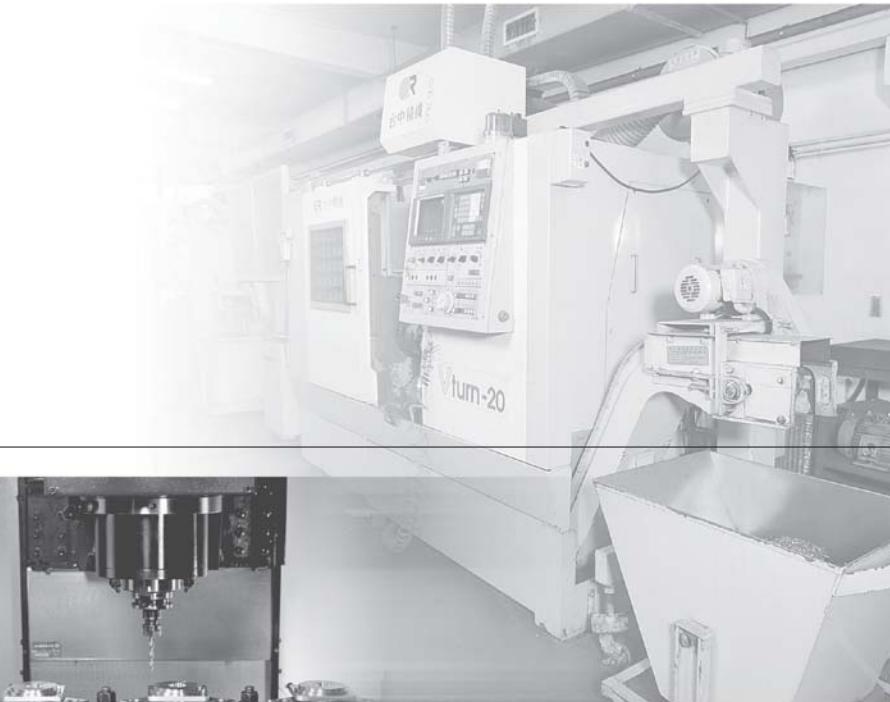

### Slow start and brake

Can be used to adjust the speed to reduce the impact upon the load starting or stopping. If it is overheating, shorten the time for the slipping difference.

## 機型選用 Selection of Machine Models

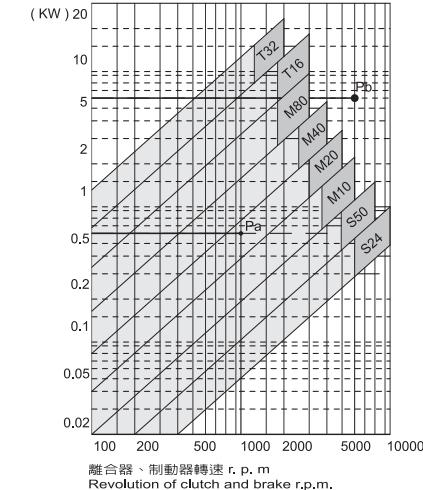

在一般的使用環境下離合器與制動器的選用是一件單純簡易的工作。為了能迅速的找到所適用的型式，請善用右邊之型式選定圖。圖中淺顏色部份為正常使用範圍，在深顏色部份就必須注意工作量，散熱能力及耗电量。

In normal condition, selection of clutch and brake is a very simple and easy task. In order to select the desired ones, please consult the selection chart on the right side. Light color in the chart shows normal use range while dark color indicates attention must be paid to the workload, heat dissipation capability and attribution.

## 離合器／制動器選定之負荷係數f Load Co-efficient f of Clutch/brake

負荷型態 Load Type	機械種類 Type of Machinery	負荷係數f Load Co-efficient f
定負荷 Fixed load 低慣性 Low inertia 低頻度 Low frequency	小型工作母機、小型紡織機、小型高速幫浦、小型木工機器、事務機器 Small machine tool, small textile machinery, mini-high speed pump, small carpenter machine, business machine.	1.5
變動負荷 Variable load 低慣性 Low inertia 低頻度 Low frequency	中型工作母機、小型冲床、木工機器、絞盤、小型幫浦、紡織機、空氣壓縮機、送風機 Medium machine tool, mini-lathe, carpenter machinery, capstan, mini-pump, textile machinery, air compressor, draught blower	2.0
變動負荷 High inertia 低頻度 Low frequency	工作母機、中型冲床、紡織機、印刷機、包裝機、輸送機、製藥機器、吊車、攪拌機、攻牙機 Machine tool, medium lathe, textile machinery, packaging machine, transmission machinery, pharmaceutical machinery, crane, mixer, Tapping Machine	2.5
重負荷 Heavy load 高慣性 High inertia 高頻度 High frequency	大型冲床、大型洗床、壓延機、造紙機、其他大型工作母機 Giant lathe, giant milling machine, rolling machine, paper machine, other giant machine tool.	3.5

## 型式選定圖 Selection Chart

**例一、**  
馬達額定出力0.75KW的感應馬達，使用於低慣性、低頻度之變動負荷，離合器迴轉數為1000 r. p. m.，離合器／制動器額定動轉矩計算如下：

**Example 1:**  
An induction motor with rated horsepower of 0.75W under variable load of low inertia and low frequency and revolution of the clutch is 1,000 r.p.m., computation of the rated dynamic torque of the clutch/brake is as follows:

$$0.75 \times \frac{2}{2.5} = 0.6 \text{ (KW)} \dots \text{Pa} \quad (\text{參照左圖})$$

由圖例0.6KW與1000 r. p. m. 的交點，選用型號M20離合器

By the cross point of 0.6KW and 1,000 r. p. m. as indicated in the chart, the desired model should be M20 clutch.

**例二、**  
馬達額定出力7.5KW的感應馬達，使用於低慣性、低頻度之變動負荷，離合器設計迴轉數為5,500 r.p.m.，離合器／制動器額定動轉矩計算如下：

**Example 2:**  
An induction motor with rated horsepower of 0.75W under variable load of low inertia and low frequency and revolution of the clutch is 5,500 r.p.m., computation of the rated dynamic torque of the clutch/brake is as follows:

$$7.5 \times \frac{2}{2.5} = 6 \text{ (KW)} \dots \text{Pb} \quad (\text{參照左圖})$$

由圖例6KW與5,500 r. p. m.的交點，超出選用範圍，為不正確之設計。

By the cross point of 0.6KW and 5,500 r. p. m. as indicated in the chart, the desired range is selected and we note that the design is not correct.

# Technical Data

## 簡易計算 - 選用法

Simplified computation for selection

選用法所依據的準則如下：

The standard rules for selection are as follows:

**準則（一）：**  $T_d$ 需大於離合器之最大動摩擦轉矩  
 $T_d$  must be bigger than the maximum dynamic friction torque

Rule 1:

於連結時

Under connection

**準則（二）：**  $T_d$ 需大於離合器之最大靜摩擦轉矩  
 $T_d$  must be bigger than the maximum static friction torque

Rule 2:

於連結後

After connection

**準則（三）：**  $n$ 不得大於容許最高迴轉數  
 $n$  must not be bigger than the maximum allowable number of revolutions

Rule 3:

以“簡易計算-選用法”作為離合器／制動器轉矩選定之參考

Use the simplified computation for selection as a reference for selection of clutch/brake torque.

$$\text{公式} = T_d (\text{kgt-m}) = 973 \cdot \frac{Kw}{n} \cdot f = 726 \cdot \frac{HP}{n} \cdot f = 716 \cdot \frac{PS}{n} \cdot f$$

Formula  
 $T_d$ ：離合器或制動器額定動轉矩(Kgf-m)  
 $T_d$  : The rated dynamic torque of clutch or brake  
 $KW$ ：馬達出力(KW)  
 $KW$  : Motor horsepower (KW)  
 $f$ ：負荷系數  
 $f$  : Load co-efficient

HP : 馬達出力(HP)  
 $HP$  : Motor horsepower  
 $PS$  : 馬達出力(PS)  
 $PS$  : Motor horsepower (PS)

## 例三、

馬達額定出力0.75KW的感應馬達，使用於低慣性、低頻度之變動負荷，離合器迴轉數為1000 r. p. m.，離合器／制動器額定動轉矩計算如下：

### Example 3:

An induction motor with rated horsepower of 0.75W under variable load of low inertia and low frequency and revolution of the clutch is 1,000 r.p.m., computation of the rated dynamic torque of the clutch/brake is as follows:

$$T_d = 973 \times \frac{0.75}{1000} \times 2.0 = 1.5 \text{ (kgf-m)}$$

依據準則（一）、（二）選取M20離合器By Rules 1 and 2, we select M20 clutch.

## 例四、

馬達額定出力7.5KW的感應馬達，使用於低慣性、低頻度之變動負荷，離合器設計迴轉數為5,500 r. p.m.，離合器／制動器額定動轉矩計算如下：

### Example 4:

An induction motor with rated horsepower of 0.75W under variable load of low inertia and low frequency and revolution of the clutch is 5,500 r.p.m., computation of the rated dynamic torque of the clutch/brake is as follows:

$$T_d = 973 \times \frac{7.5}{5500} \times 2.0 = 2.65 \text{ (kgf-m)}$$

若依準則（一）、（二）選取M40離合器，但是因為本離合器設計迴轉數5,500 r. p. m大於M40離合器容許最高迴轉數4,000 r. p. m，是為不正確之設計。但若以M20取代，則可符合需求，唯間隙調整壽命及工作量應加以檢討。By Rules 1 and 2, we should select M40. However, since the designed number of revolutions of the clutch is 5,500 r.p.m., which is bigger than the maximum allowable number of revolutions M40 operates, this is an incorrect design. If replaced by M20, it could meet the requirements, although clearance adjustment and service life and workload must be subject to review.

Computation of GD<sup>2</sup>inertia torque

● 實心圓棒之簡易\_計算法  
Simplified computation for solid pole

$$GD^2 = 3.0827 \times 10^{-12} \times D^4 \cdot L \cdot K$$

實心圓棒 solid pole

$$GD^2 = 3.0827 \times 10^{-12} \times (D^4-d^4) \cdot L \cdot K$$

空心圓棒 Hollow pole

D : 圓棒直徑(mm)	L : 圓棒長度(mm)	K : 材料因數	鋼鐵=1	銅材=0.34	鑄鐵=0.93	銅材=1.13
D : Pole diameter	L : Pole length	K : Material factor	Steel=1	Aluminum=0.34	Cast iron=0.93	Cooper=1.13

例一、  
直徑109mm，長度100mm的鋁棒， $GD^2$  為何？  
**Example:**

An aluminum pole with a diameter of 109mm and length of 100mm, what is its  $GD^2$ ?

簡算法：  
Simplified computation method:

$$\begin{aligned} GD^2 &= 3.0827 \times 10^{-12} \times D^4 \cdot L \cdot K \\ &= 3.0827 \times 10^{-12} \times 109^4 \times 100 \times 0.34 \\ &0.34 = 0.014795 \text{ (kgf-m}^2\text{)} \end{aligned}$$

**GD<sup>2</sup> 公式**  
GD<sup>2</sup>formula

●回轉體的GD<sup>2</sup>  
Gyro-rotor's  $GD^2$

$$GD^2 = \frac{W \cdot D^2}{2 \times 10^6} \text{ (kgf-m}^2\text{)}$$

$$W = \frac{\pi D^2}{4 \times 10^6} \cdot L \cdot \gamma \text{ (kgw)}$$

實心圓柱體  
Solid circular column

D : 圓柱體的直徑或外徑(mm)  
D : Diameter or outer diameter of solid circular column

$\gamma$  : 質量比重  
 $\gamma$  : Material proportion

鋼鐵=7.85  
Steel=7.85  
銅材=2.7  
Aluminum=2.7  
鑄鐵=7.25  
Cast iron=7.25  
銅材=8.9  
Cooper=8.9

$$GD^2 = \frac{W (D^2 + d^2)}{2 \times 10^6} \text{ (kgf-m}^2\text{)}$$

$$W = \frac{(D^2 - d^2)}{4 \times 10^6} \cdot L \cdot \gamma \text{ (kgw)}$$

空心圓柱體  
Hollow circular column

d : 空心圓柱體的內徑(mm)  
d : Internal diameter of hollow circular column

●質量慣性矩 (I) 與重量慣性矩(GD<sup>2</sup>)換算  
Conversion of quality solid moment (I) and weight inertia moment ( $GD^2$ ) :

$$GD^2 = 4gI_x = 39.24I_x$$

$g$  = 重力加速度 9.81 (m/sec<sup>2</sup>)  
 $g$  = gravity plus velocity 9.81 (m/sec<sup>2</sup>)

I = 質量慣性矩 (kgf-m·sec<sup>2</sup>)  
 $I$  = weight inertia moment (kgf-m·sec<sup>2</sup>)

●水平 / 垂直運動體  
Level/vertical motion body

$$GD^2 = W \cdot \frac{D^2}{10^6} \text{ (kgf-m}^2\text{)}$$

# The Motion Characteristics Of Clutch, Brake

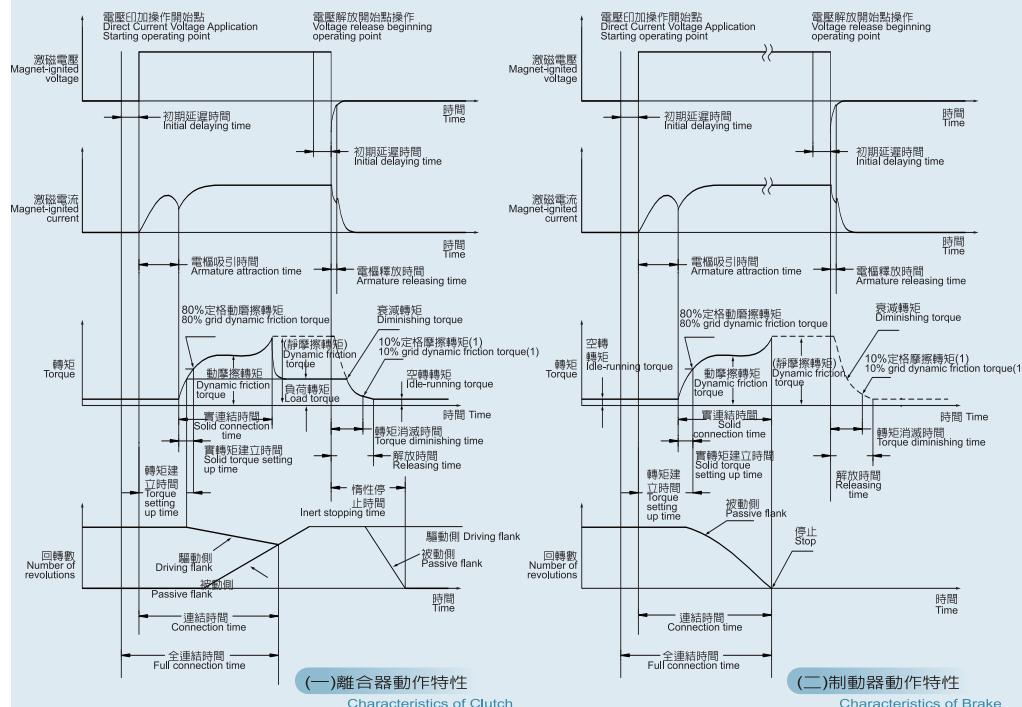

PeelMoger

離合器、制動器的動作特性

電磁離合器、制動器功能，除扭矩傳遞、制動以外，其電樞片吸引釋放時間，是否能在規定時間內完成機械動作更形重要。 Except transmission and braking, the function of electromagnetic clutch and brake seems more important hinging on whether the time it takes to attract and release the armature plate in time to complete the mechanic movement.

圖(一)(二)為激磁動作形電磁離合器、制動器，電壓、電流波形。

Fig. 1 and Fig. 2 show magnet-motion electromagnetic clutch, brake, voltage and current wave.

測試電路控制方式，是利用電磁繼電器接點控制直流側，使其產生ON-OFF動作。直流電源採用DC24V，線圈並接保護素子(TNR9G820K)吸收突波電壓，保護接點壽命及避免線圈絕緣被破壞。

The method to test circuit control is to use electromagnetic relay junction to control the direct current flank, making it create ON-OFF movement. The power source of direct current uses DC24V and coil connected with protective prime factor (TNR9G820K) to attract abrupt voltage so as to protect the service life of the junction and avoid damage of the coil insulation.

## 離合器、制動器之電樞片吸引釋放時間

Attraction and Releasing Time of Armature Plate in Clutch and Brake

# Basic Control Circuit

PeelMoger

基本控制電路

## 直流電源

Direct Current (DC) power source

離合器、制動器直流電源一般採用交流電路整流，可分為半波整流及全波整流。

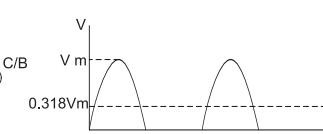

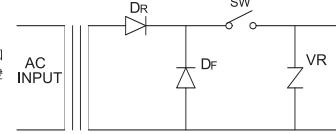

The DC power source of clutch and brake generally uses alternating current (AC) circuit commutation, which is classified as half-wave commutation and full-wave commutation.

### 1. 半波整流電路

Half-wave commutation circuit

半波整流電路是使用一個矽二極體當做整流子，電路構造較簡單且價格便宜，但因濾波因數較大，所以電流波形變動大，相對扭矩也變動大，較不切實用。

Half-wave commutation circuit uses diode as commutator, the structure of which is rather simple and the price is cheap. However, due to the ripple factor, the current wave tends to vary greatly, causing rather huge variation relatively in torque. That makes it not practical in use.

$$V_{dc} = 0.318 V_m \\ = 0.318 \sqrt{2} V_{rms} = 0.45 V_{rms}$$

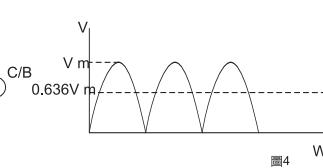

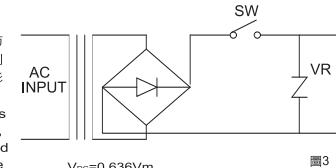

$V_{rms}$ = 交流電壓均方根值( $V_m=\sqrt{2} V_{rms}$ )  
 $V_{rms}$ = AC voltage root-mean-square value

### 2. 全波整流電路

Full-wave commutation circuit

一般離合器、制動器直流電源供應都使用此方式，是利用變壓器降壓後做橋式整流，而達到濾波因數較小較平滑電壓波形，所以電流波形變動小，扭矩也較穩定。

Generally speaking, clutch and brake use this manner in their DC power supply. In practice, it uses transformer to depress the voltage and make bridge commutation in order to achieve rather smooth voltage wave to circumvent the ripple factor. Consequently, variation of current wave is nominal and torque can be comparatively steady.

$$V_{dc} = 0.636 V_m \\ = 0.636 \sqrt{2} V_{rms} = 0.90 V_{rms}$$

$V_{rms}$ = 交流電壓最大峰值  
 $V_{rms}$ = maximum AC voltage peak value

## 電壓調節控制

Voltage regulation and control

離合器、制動器在有些場合須要控制扭矩大小，可使用電壓調節方式控制。

On some occasions, torque of clutch and brake needs to be regulated and controlled and the method used relies on voltage regulation and control.

### 1. 固定電阻式或可變電阻式

Fixed resistor or variable resistor method

固定電阻式是數個固定電阻與離合器、制動器線圈串聯，利用切換開關控制不同電阻值之壓降而達到調整電壓之方法。(圖5)可變電阻式是利用可變電阻VR，調整不同電阻值而達到變動連續電壓。(圖6)

The fixed resistor method is several fixed resistors in series with coil of clutch, brake, using the switch to control voltage depression from different resistor values and thereby achieve the goal of voltage adjustment, Fig. 5 show how variable resistor (VR) at work, adjusting different values to reach the goal of varying continuous voltage. Fig. 6

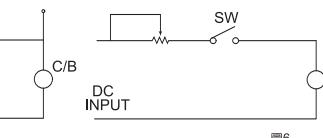

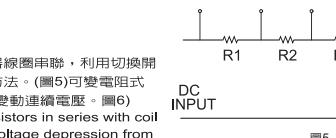

圖5

圖6

### 2. 可變電壓調整器方式

Variable voltage regulator method

是利用自耦變壓器裝置在變壓器一次側，來調整電壓，使變壓器二次側電壓可由零開始調整起。(圖7)

The method installs auto-transformer on the primary transformer flank to regulate voltage, making the second transformer flank to adjust from zero (see Fig. 7).

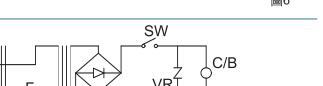

圖7

### 3. 相位控制

SCR phase control

是利用相位控制回路(如UJT等)產生觸發脈波來控制SCR

輸出電壓相位角度。(圖8)(圖9)

The method uses phase to control loops such as UJT to create trigger pulse wave in order to control the transmitted phase angle of voltage.

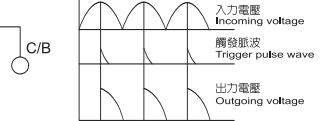

圖8

## 電流調整控制

Current regulation and control

是利用晶體控制回路可以得到較穩定扭力輸出。(圖10)

Crystal is used to control the loop to have steady torque output.

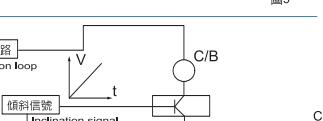

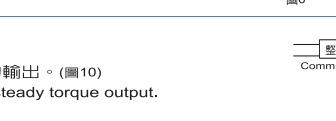

圖10

C7

# Use Conditions and Caution When in Use

PeelMoger  
使用條件與注意事項

## 電源系統

### Power Source System

激磁電壓之正確使用，激磁電壓之標準為DC24V，而在高、低性能上之影響，以不超過  $\pm 10\%$ 為原則。Please note the standard magnet-ignited voltage is DC24V while under the influence of high and low performance should not in principle exceed  $\pm 10\%$ . This is the correct use of magnet-ignited voltage.

## 電氣接點保護

### Electric contact protection

離合器與制動器 ON-OFF 之電氣接點，應以本公司所提供之突波吸收器並聯，以保護控制接點及系統。若以電晶體或固態電驅控制，除需注意離合器與制動器切換干擾狀況，亦應加裝突波吸收裝置，以保護接點。The electric contact ON-OFF of clutch and brake is recommended connected in parallel using the abrupt wave absorber we provide so that the electric contact and system may be duly protected. If controlled by transistor or solid relay, attention must be given to the switching disturbance of the clutch and brake. However, for better protection, additional installation of the abrupt wave absorber is recommended.

## 使用環境

### Use Environment

- 使用溫度40°C以下室外使用時，要有良好之防護。儘量避免暴露在雨水或腐蝕性較高的氣體下作業。
- When used outdoors under temperature 40°C, excellent protection is needed. Try to avoid operations exposed in rains or to highly erosive gas.
- 於高負荷作業下，應注意通風及冷卻之問題，摩擦面摩擦時，可能會有少許火花發送，於有塵爆或防爆顧慮的場合，不可使用。
- When operating with high load, be careful with ventilation and cooling issues. A spark of fire may ignite when the friction surface is in friction and it is not suitable on occasions when dust may rise or anti-explosion preparation is in progress.

## 摩擦間隙調整

### Friction Clearance Adjustment

來令片與電樞片的間隙，會隨著摩耗的發生而增大，應將間隙調整至“規格間隙”，以免失效。  
The clearance between lining plate and armature plate may become bigger with the occurrence of friction. To avoid ineffectiveness, adjust the clearance to the 'specified clearance specifications.'

## 汙染

### Pollution

本產品為乾式單板激磁性結構，其傳動靠兩高摩擦係數平面，傳動扭矩。絕對避免水、粉塵、油脂類產品之附著。

This product is of dry single-panel magnet-ignited structure, the driving of which relies on the friction coefficient of the two quotients and driving torque. It is absolutely necessary to avoid water, dust or grease to be attached to the product.

## 摩擦轉矩

### Friction torque

乾式單板電磁離合器與制動器的靜摩擦扭矩，依各機型有別，大約成一定值。但動摩擦係數，會隨使用的轉速(r.p.m.)提高而略成遞減。

The static friction torque of dry single-panel magnet-ignited clutch and brake is not the same, but approximately have a fixed value. However, the dynamic friction co-efficient will slightly reduce progressively with the elevation of the r.p.m. used.

使用初期，由於兩相對應摩擦面尚不十分平滑，初期的摩擦轉矩約為額定靜摩擦轉矩的70%-80%，經使用後自然磨合達額定轉矩，為必經過程。諸如以上的定轉矩使用場合，請洽本公司技術諮詢部門，以利協助設計。

In the initial stage of use when friction of the two phases has not become smooth, the initial friction torque ranges approximately 70% to 80% of the rated value. The process that must go through calls for natural abrasion after use before the rated torque value is reached.

離合器制動器組合

## 雙離合單制動器單軸型

Dual Clutch Single Brake, Single Axial Type

S-□ □ □ -A31

轉矩代碼  
Torque Code

### ● 雙離合器單制動器的組合單元

Assembly element of dual clutch single brake

● 鋁合金本體，開放式結構。

Aluminum body with open-ended structure

● 單軸，單凸端結構。

Single axis, single convex end structure

● 兩離合器的軸承座為入力端，由軸端出力。

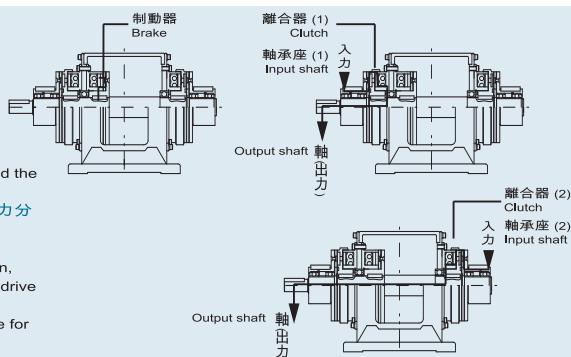

Input end at the bearing seat of the two clutches and the output at the axis end

● 適合2段變速定位停止，高頻度正逆轉，動力分配且精確定位的傳動組合。

Suitable for assemblies of 2-stage transmission positioning stop, high-frequency regular reverse turn, moving force distribution, and precision positioning drive

● 臥式固定方式，組合安裝容易簡便。

Fixed horizontal type, easy for assembly and simple for installation.
